Subject: Project Status Report - Kemp/DPR Integrated Desalination
Attachments: WCH14515_20150423_OnePageReport.pdf

Russell: This report is to provide you a summary of the current project status for the Kemp/DPR integrated desalination. Please contact me if you have any questions.

STATUS REPORT

Innovative approaches
Practical results
Outstanding service

PROJECT NO.: WCH14515 **DATE:** 04/23/2015
PROJECT: Lake Kemp/DPR Integrated Desalination Study
TO: Russell Schreiber
FROM: David Sloan
CC: Daniel Nix, Shawn Garcia, Mark Southard, David Jackson, Ray Longoria

PROJECT UPDATES

1. TCEQ Request Package under review by TCEQ staff. Informal comments to date appear to indicate favorable consideration.
2. TCEQ indicates separate disinfection calculations for Lake Kemp supply not needed when operating in conjunction with DPR operation. Update of Lake Kemp/Headquarters Road Pump Station CT study will therefore not be reviewed on priority track with the integrated desalination plan.
3. Initial indications from TCEQ are that first treatment test stage of blended source water from River Road and Lake Kemp will be extended to one month before advancing to higher flows.
4. Response from TCEQ anticipated near end of April.

UPCOMING SUBMITTALS AND MEETINGS

Following initial TCEQ staff review, anticipate meeting or conference call with TCEQ staff to discuss proposed changes.

PROJECT SCHEDULE

Requested TCEQ allow early implementation steps to begin by early May to facilitate testing requirements.
