RE: Updated exception for Chloramines and Chlorine Dioxide

Dear Sir or Madam,

I am writing to request an updated exception for the use of **chloramines** and **chlorine dioxide** at each of our water treatment plants, the Cypress WTP and the Jasper WTP. The City of Wichita Falls PWS ID No. is 2430001.

Chlorine dioxide is used as a pretreatment disinfectant in our raw water. It is injected at our Secondary Reservoir Pump Station as the water is pumped to the treatment plants.

Chloramines are used as a disinfectant in the treatment process at both the Jasper and Cypress WTPs. **Chloramines** are injected both pre treatment and post treatment, and a **chloramine** residual is maintained in the distribution system.

The City of Wichita Falls has previously received exceptions for the use of both **chloramines** and **chlorine dioxide**, however it was requested during our 2011 CCI that we update both exceptions as it has been 15 years or more since the previous exceptions were granted.

If you have any questions, please feel free to contact me.

Sincerely,

Mark Southard
Water Source/Purification Superintendent
