JZ

Joel,

I wanted to share this information with you, as promised. Maybe we can discuss in our next meeting?

Thanks

Jaya

Jaya,

We have prepared several documents to answer the questions you requested about the City of Wichita Falls pretreatment program. Note that the city has two wastewater treatment facilities (WWTFs): North Side WWTF and River Road WWTF. Since none of the treated effluent from the North Side WWTF is proposed to be pumped to the water treatment plant for further treatment and reuse, we've focused our efforts on compiling information regarding the River Road WWTF.

The attached document entitled the City of Wichita Falls Pretreatment Information contains the following information:

- sewer system size
- pretreatment program approval
- local limits and prohibited discharges;
- number, types of SIUs and CIUs, and process descriptions,
- hauled waste and UST information;
- known and suspected pollutants and volume of process and non-process wastewater discharged by the SIUs and CIUs;
- IU significant noncompliance issues associated with industrial permit effluent violations from the IUs;
- River Road WWTF TPDES discharge permit violations and problems with pass through and interference; and
- Recommendations

For more detailed information on industrial permit violation, see the attached Word document entitled: Wichita Falls SIU_CIU Summary of Violations.

For more detailed information on SIU and CIU discharge volumes for 2012, see the attached spreadsheet entitled: SIU and CIU Flow Summary 2012.

For more detailed information on influent concentrations of pollutants of concern (POC) and calculated loadings for each POC compared to maximum allowable headworks loading, see the attached spreadsheet entitled: River Road Influent TBLL MAHLs for 2011-2012.

Let us know if you have any questions or need additional information. David was the lead on the project so while I am please contact him.

Thanks!
Rebecca

Subject: Wichita Falls Pretreatment

Rebecca,

I need you or someone from your staff to prepare for me a one page summary of the Wichita Falls pretreatment program. Basically, I need to know how big the system is, how many WWTPs do they have, how many industries and of which types of IUs and CIUs discharge into them.

know how big the system is, how many WWTPs do they have, how many industries and of which types of RS and CFS discharge into them, and if they have had any significant noncompliance issues associated with discharge violations from these industries into the WWTPs.

Wichita Falls is considering direct potable reuse and changes to their industrial contribution could potentially impact the quality of the effluent going to the WTP.

If you could get this to me no later than Thursday of next week, I would greatly appreciate it.

Thanks!!
Jaya
