Subject: Re: Wichita Falls DPR Continuation

Joel,

Just to follow up on what Mr. Sloan as stated, it is the City's understanding that, upon review and confirmation of this remaining piece of information from Trojan, the exception that was granted on June 27, 2014, amended on August 5, 2014, and extended on December 10, 2014, until February 28, 2015, will, effective March 1, 2015, be no longer for a term, but be granted for the duration of the use of the City's DPR project, contingent on adherence to the terms and conditions therein.

Respectfully,

Russell Schreiber P.E
Director of Public Works
City of Wichita Falls Texas
940 761 7477

Joel: The City of Wichita Falls began full operation of their new UV disinfection system on the DPR treatment facility at the Cypress WTP on February 13, 2015. This operation includes full recording of required status and calculation of log reduction for Cryptosporidium in accordance with the stipulated requirements. We submitted documentation for this on February 18, and received a request for additional information from Craig Stowell on February 23. Everyone involved is working to bring this to completion as quickly as possible, but the current authorization is through the end of February, and the City wants to be sure there is no cause for interruption of this critical water supply source.

We expect to submit supplemental programming information from Trojan by tomorrow, February 26, and believe this is the only documentation lacking. However, the city understandably would like to have a contingency plan in place to allow continued operation in the event formal approval of the UV installation is not in place by this Saturday.

We appreciate the continued priority TCEQ has placed on this situation. Please contact me if we need to discuss this.

Sincerely,

David W. Sloan, P.E., BCEE
